

Life cycle of a chicken

Name: _____

The rooster and hen mate and the adult hen lays an egg.
The hen uses her body to keep the egg warm.
After 21 days, a baby chick hatches from the egg.
After three months the chick has grown into an adult chicken (hen or cockerel).

Fill in the correct answers to complete the sentences:

The chicken uses her body to _____

A baby chick hatches after _____

The chick grows into a _____ or _____
after _____

Did you know? A rooster is a mature male chicken and a cockerel is a young male chicken.
